The Danish AgriFish Agency

The Danish AgriFish Agency is a governmental institution (www.naturerhverv.dk) under the Danish Ministry of Food, Agriculture and Fisheries.

In dividing responsibilities with the other institutions under the Danish Ministry of Food, Agriculture and Fisheries, The Danish AgriFish Agency concentrates on the first stage of the food chain from farm to fork.

We contribute to creating a framework for development-oriented business activities within plants, seed, feeding stuffs and organics.

The vision of The Danish AgriFish Agency is:

- to be among the leading and most respected authorities within plants and feedingstuffs
- to ensure the interaction nature and industry through regulations, subsidies, control and dialogue. Sustainable is the key word for our work.

Department of Variety Testing, Tystofte

The main responsibility of the Department of Variety Testing is to conduct as effective as possible the technical and administrative tasks concerning the statutory variety testing according to the rules for entry on the National List or for the grant of plant variety protection.

The Department is an independent financial unit, the economy depending upon the income from the testing fees and the fees for National Listing and registration for Plant Breeders' Rights, according to the criteria of a 100 per cent covering of costs of testing and indirect costs to the administration of The Danish AgriFish Agency as laid down by the Ministry of Food, Agriculture and Fisheries.

Since 2009 the Department of Variety Testing also conducts the control field (variety identity & purity) regarding seed certification.

Background:

Experiments with plant production in Denmark started privately in the beginning of the 1870's by the school teacher, Peder Nielsen, at Ørslev village school near Skælskør.

Besides his teaching profession Mr Nielsen carried out extensive botanical studies and he not only made purely scientific work in this field, but in the course of time also practical research and examinations with agricultural plants as well as herbicides, plant diseases and how to control them.

Peder Nielsen started at the school allotment and at different farms series of thorough examinations which mainly aimed at a highly needed improvement of the grass fields by using pure seed from the best growing places and in the right mixtures.

These examinations aroused great interest among the farmers and in their organisations, so in 1882 Mr. Nielsen became adviser for The Royal Danish Agricultural Society parallel with his schoolwork at Ørslev. As time went on the continually growing research work could not be contained within the framework of the available land, and in 1885 the Royal Danish Agricultural Society recommended to the Ministry of the Interior that 10,000 DKK be granted annually for the work. The grant of this amount resulted for one thing in a considerable extension of the ongoing trials. To cover the need for more land Mr Nielsen applied to Mr C.V.B. Castenschiold of Borreby manor, who had been following the research work with great interest. He was immediately willing to help if a suitable area could be found. A tenant of one of his farms - the Studegaarden at Tystofte- was therefore bought out with about 20 ha land, where trials and new buildings were established for future research work.

On the 1st of April 1886 Peder Nielsen inaugurated Tystofte as the first Governmental Research Station in Denmark, and thus founded the Danish Institute of Agricultural Sciences.

The physical settings:

Land:

New research work made it necessary to have more land, and in 1891 the Research Station took over the whole farm, which covered 30 ha.

The research station has now 115 ha of land at its disposal (-own – rented)

Buildings:

The Research Station consists of several buildings, most of which were established in 1886 and served as stables, barns, working rooms and for living. As the years went by these buildings were altered and new were built.

When animal husbandry stopped in the middle of 1960's the buildings which had held the animals were transformed into laboratories and working rooms.

In 1959-60 a laboratory with greenhouses and climate room for the testing of variety resistance to different diseases and pests was built, as well as for freezing tests to evaluate the resistance to frost of winter cereals.

In the late 1960's a laboratory for the testing of baking quality of varieties of wheat was established, and in 1987 was added a micro malting system for the testing of varieties of barley for their suitability to malting and brewing was added.

In 1987-88 two experimental barns were removed and a new hall was built and prepared for keeping agricultural machinery and for working rooms for the treatment of seed samples.

In 1990 two old glasshouses were removed and a new glasshouse was built and equipped with modern technical installations. In 2009 an additional storage facility was established.

Historical Development

The grassland examinations made by Peder Nielsen during the years 1877-88 had the purpose of enlightening the relation between the amount of seed and the composition of the vegetation, but also to show which contribution each of the species used gave to the yield in each year of use.

Mixing single species of legumes with single species of grasses made testing of different mixtures. The results showed that the greatest yield came from a mixture with the grass variety yielding most when at the same time drowning the pulse crop least. These trials with different mixtures have been the basis for directions about seed mixtures up to the present.

About the turn of the century and the following 10-15 years a significant work with regard to breeding and improvement of agricultural plants was made at Tystofte. This work was of great importance to the practical farmer as it meant new varieties that yielded more and had better agricultural characteristics than the varieties earlier used.

Especially the improvement of the cereal varieties gave great results. The spring barley variety 'Tystofte Prentice' - bred during the years 1898-1901 - proved to be the best yielding barley variety and was thus quickly and widely distributed.

Two winter wheat varieties - 'Tystofte Standhvede' and 'Tystofte Smaahvede' - bred during the years 1901-1905 had great advantages to the commonly grown varieties, especially on account of their winter hardiness. Also the 6-row barley 'Tystofte Kors' and oats 'Tystofte Gulhvid' should be noted as considerable improvements.

Furthermore, an intensive work was done to improve the most important herbage plants. New varieties of red clover, Italian ryegrass and sugar beet for fodder became widely used.

Many different trials with varieties of several agricultural species followed, but as the testing became more and more extensive, the field of activity changed and the main task of the Institute became the testing of varieties of cereals and herbages.

Trials comparing a great number of different Danish and foreign varieties were made in order to guide the farmer in his choice of varieties for practical farming. Besides for assessment of their yield the varieties were also tested for their cultural and quality characters.

On the whole, until 1970 testing and approval of varieties were very liberal. The testing at the Institute, which must be described as the official testing, took place without specific rules as regards the whole range of cereals, pulse crops, potatoes and oil seed crops inclusive of industrial crops.

For root crops, herbage and vegetables rules were laid down for testing and approval by way of a system of recognition, which gave the owner certain rights and imposed upon him certain commitments.

As regards vegetables the variety testing was divided between the Institute and The Joint Committee for Trial Cultivation of Vegetables by mutual agreement.

The research centres were not obliged to test all the varieties that the owners wanted them to test, only "if accommodations allowed". However, the testing was without expenses on the part of the owner.

Testing of varieties was intended, as guidance only, as the sale of seed of any variety was free. Official control with propagation and guarantee for genuineness of varieties were of course conditional on knowledge about the varieties and thus chiefly limited to varieties that had been tested.

There were restrictions in one area, however. The law of 1962 concerning protection of Plant Breeders' Rights prescribed that protected varieties could be marketed only if a test had proved them worthy of being on a list of approved varieties.

A National List proper was published for the first time in 1970, and until then the above-mentioned demand on protected varieties was met by means of a footnote to that effect in the publications of the Institute on the results of the testing.

In 1970 new rules for testing of varieties of agricultural plants - all commonly grown species - were recognised. The immediate cause for these new rules was a bilateral agreement with West Germany concerning the testing and approval of varieties, giving German owners equal status in Denmark as Danish owners and vice versa.

The new rules differed from the preceding rules in some important respects. The limited obligation to test varieties was abolished, and any variety applied for examination now had a right to be included in the testing. Moreover, fees had to be paid for the testing and for entry on the National List.

When Denmark joined the European Economic Community in 1973 testing for entry on the National List became statutory, as certification and marketing of a variety depended thereupon.

The research station at Tystofte became responsible for the testing of varieties of cereals, herbage and amenity grasses, and was from January 1st 1988 as Department of Variety Testing responsible for the following tasks:

To organise, be in charge of and take part in the professional/technical examinations and trials as well as attending to the daily administrative tasks concerning the statutory variety testing with a view to entry of varieties on the National List and/or obtaining Plant Breeders' Rights.

The responsibilities concern agricultural as well as horticultural varieties which must/may be registered for entry on the National List and/or for plant novelty protection.

The Official Variety Testing

The official variety testing includes an obligatory testing of new varieties for addition to the National List and an offer of testing with a view to the grant of Plant Breeders' Rights.

Addition to the National List

The obligatory testing of agricultural and vegetable varieties is based on the legislation drawn up in accordance with EU directives. The legislation covers the most important species of agricultural plants and vegetables. Only tested and controlled material of agricultural and vegetable varieties and amenity grasses can be marketed within the EU territory. The condition of control of seed of a variety is that the variety is included in the Danish National List or in a similar list of another EU Member State.

Purpose:

By testing for distinctness, homogeneity and stability (DUS) to identify and describe new varieties in order to secure seed of varietal genuineness for the user. By testing for value for cultivation and use (VCU) to secure the user new varieties with better characters as regards, resistance yield and/or quality.

National Plant Breeders' Rights

The official variety testing of all agricultural and horticultural species for Plant Breeders' Rights is carried out in accordance with The Plant Variety Protection Act, based on an international convention (the UPOV-convention). Horticultural plants include in addition to vegetable species landscape-, ornamental- and fruit species. The technical testing consists of examinations for distinctness, homogeneity and stability.

Extent of the testing

DUS testing:

- Testing of agricultural plants, amenity grasses vegetables and other horticultural plants.
- In case a variety is applied both for addition to the National List and for Plant Breeders' Rights the same DUS test is used as the basis of approval.

The testing is performed according to the

1. CPVO technical protocols
2. UPOV guidelines
3. National guidelines and is accredited by the CPVO

VCU testing:

The responsibility for the official VCU testing is placed with The Danish AgriFish Agency. That includes also the testing at breeders and maintainers premises.

Department of Variety Testing supervises the VCU testing of all species of agricultural plants, and one part of the testing takes physically place at the Department. The VCU testing assesses the yield, resistance and quality of the varieties, and for grasses their growth rhythm.

The premises for the testing are with The Danish AgriFish Agency, the Agricultural Advisory Service, and representatives of plant breeders and maintainers/holders.

Additional examinations can be included in the testing if required, depending on the characteristics of that particular variety. The results from the additional examinations form part of the basis on which decisions are taken.

The costs of normal testing and of requested additional examinations are fully covered by payment of fees.

Testing of agricultural plants is divided into three groups of crops:

- cereals, pulse crops, oilseed crops, root crops, maize, catch crops and sugar beets
- potatoes
- herbage plants

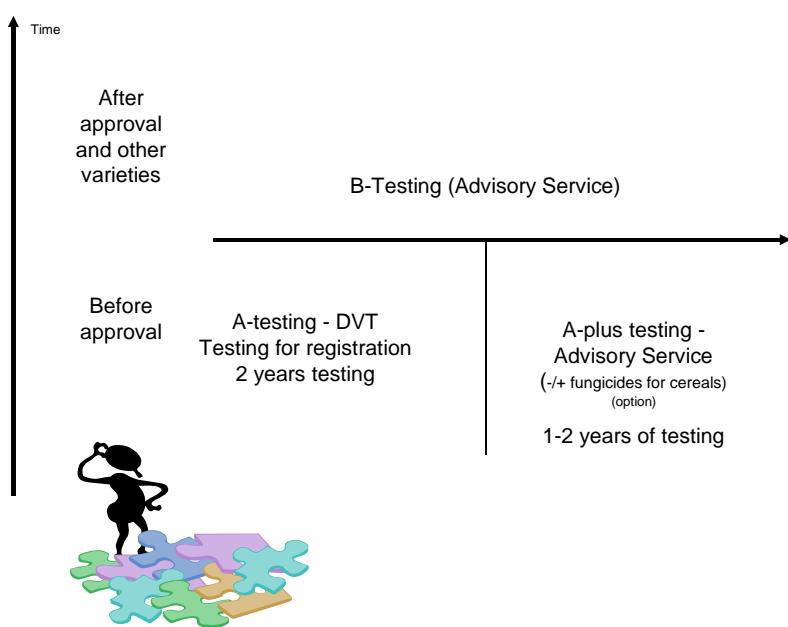

VCU Testing of Cereals, Pulse Crops, Oilseed Crops, Maize and Sugar beets

Varieties of cereals, pulse crops, oilseed crops and maize can be tested in three different combinations:

- A-testing,
- A and A-plus testing or
- B-testing

A-testing

Varieties applied for inclusion in the Danish Variety List are tested in this group. The normal testing period is two years. The testing takes place on locations at the Danish AgriFish Agency, at the Agricultural Advisory Centre (trial hosts) and at breeders. This testing is 100% self-financed by fees.

A-plus-testing

Varieties applied for A-testing can be included in the A-plus-testing. The testing is a supplement to the statutory VCU testing and has the purpose to provide an extended basis for recommendations to the farmers on choosing varieties.

The testing, for which varieties have to be applied, is voluntary and does not form part of the statutory testing. The testing period is one or two years depending on the time of application. Thus, a variety having been in A-testing one year can be included in the A-plus-testing the second year. The responsibility for this testing is placed with the Agricultural Advisory Centre.

B-testing

Varieties can be included in the B-testing if they have entered the Danish National List, the EU Common Catalogue or if they are of particular interest in Denmark. The testing is carried out each year, and the varieties must be applied for each year to participate. The testing is an offer and does not form part of the statutory VCU testing. The responsibility for the testing is placed with the Agricultural Advisory Centre.

- sugar beets

Together with Nordic Beet Research (NBR) an integrated VCU-testing of varieties of sugar beet applied for National Listing and varieties applied for recommendation have started since 2006.

Observation Plots

Observation plots are included as part of the VCU testing of cereals. Varieties which have been applied for the A- or B-testing are included in the observation plots.

Re-testing of previously approved varieties

Re-testing of varieties which have already entered the National List takes place through the B-testing of varieties of cereals, pulse crops, oilseed crops, maize and sugar beets. This testing is carried out at the Agricultural Advisory Centre or Nordic Beet Research (NBR) and the varieties must be applied each year for testing.

Potatoes

The Danish AgriFish Agency, Department of Variety Testing, and the breeders have entered into a co-operation on the VCU testing of potatoes regarding the locations and implementation of the testing.

VCU Testing of Herbage Plants

The statutory VCU testing of herbage plants is conducted in cooperation with the Danish Advisory Service and coordinated with the retesting of varieties for continued recommendation to the Danish farmers. The basic idea of the coordinated testing is that varieties for National Listing undergo the same testing as retested varieties.

Identity control of varieties

All varieties under testing are ID-controlled against the standard sample of the variety.

Extent of the administration

Department of Variety Testing attends to the daily administrative tasks of all registered varieties (NL + PVP). The tasks are:

- Receipt of applications for entry on the National List and / or for Plant Variety Protection, inclusive further proceedings.
- Co-operation with other countries, such as receipt and dispatch of DUS reports.
- Administration of proposals of variety denominations.
- Publishing of "Danish Gazette for Plant Varieties" once/month and "The Official National List of Varieties" once/year.
- Invoicing of fees.

Furthermore, the Department has the presidency and/or the secretariat for several organs related to the official variety testing.

Fees

A fee is paid for application, for testing and, as regards approved varieties, for the annual inclusion on the National List and/or the National PBR register, to cover 100 per cent the direct costs at the Department of Variety Testing and the other units carrying out testing, as well as the indirect costs to the administration of The Danish AgriFish Agency.

Publications

The Department publishes "Meddelelser fra Sortsafprøvningen" (the Danish Gazette for Plant Varieties), the "Officiel Sortsliste" (National List of Varieties) and: <http://1.naturerhverv.fvm.dk/sortsafproevning.aspx?ID=9438>.

The results of the VCU testing are published in (Danish descriptive variety list), issued by the Plant Directorate. Results are also published in "Sortsforsøg" (Survey of the National Trials) in co-operation with the Agricultural Service.

Principles for Addition to the Variety List

Legal background:

- Directives of the European Union concerning the listing of varieties and the declaration of characteristics and minimum demands for testing
 - 2202/53/EC of 13 June 2002 – Agricultural Crops
 - 2002/55/EC of 13 June 2002 – Vegetable Crops
 - 2011/68/EC of 1 July 2011 – Technical requirements of the testing to be performed
- The order of the Danish Ministry of Agriculture, Fisheries and Food concerning variety testing No 1492 of 15 December 2010 and naming of plant novelties No 1491 of 15 December 2010.

Conditions for addition:

- The variety must - regardless of an artificial or natural origin of the basic material - be clearly distinguishable by one or more important characteristics from any other variety known within the European Union, and these characteristics must be recognisable and to be clearly described.
If the testing proves that two or more varieties cannot be clearly distinguished, the variety that was first duly applied is approved.
- The variety must be sufficiently homogeneous, having regard to the particular features of its sexual reproduction or vegetative propagation, when it consists of plants - apart from single off-types - which are similar with regard to the characteristics laid down for the testing of homogeneity of that particular species.
- The variety must be stable in its essential characteristics; that is to say, it must remain true to its description after repeated reproduction or propagation or, where the breeder has defined a particular cycle of reproduction or multiplication, at the end of each cycle.
- The variety must have a satisfactory value for cultivation and use compared to other varieties accepted in the National List, and hold out a clear improvement either for cultivation or as regards the uses of the crops or the products derived there from. The decision is taken after an overall judgement of the qualities in the way that other favourable ones can counterbalance single unfavourable qualities. This condition does not apply to varieties of herbage for other purposes than production of fodder (amenity grasses) and vegetables.

A variety can be denied inclusion on the National List in case the growing of that variety causes a risk to the health of humans, animals or plants.

If the name later turns out to be unsuitable, the Plant Novelty Board may annul the approval and direct the applicant to submit another naming proposal. In a transitional period, the original denomination may be used as supplementary.

Decision on Addition to the National List:

The Danish AgriFish Agency makes the decision about inclusion of a variety in the National List on the basis of the examination results and after recommendation from the board for variety testing.

The Danish AgriFish Agency also makes decision on approval of the denomination.

The recommendation of the technical board is made known to the applicant, who is entitled within a fixed date to object or to submit the matter, before the recommendation is sent to The Danish AgriFish Agency.

Varieties of herbage for other purposes than production of fodder (amenity grasses) may be given recognition, in case the testing shows that the varieties have a satisfactory value for cultivation and use. These varieties have a right to have an 'S' added to the denomination as sign of recognition.

A variety register is made with information about each variety, i.e. the description of the variety and all facts that underlie the approval.

Anyone with a legitimate interest in this information has access to the register, but not to the results of the possible testing and description of the genealogic components of the variety, if the applicant wants them to be in confidencency.

In case a variety is not approved, or if a previous approval is withdrawn, the test results are at the disposal of the persons concerned.

However, the Department of Variety Testing is entitled to publish results concerning varieties offered for sale, sold or grown in Denmark.

The period of validity:

Approval of a variety for addition to the National List is valid until the expiration of the 10th year after approval has been given. The approval may be prolonged for a period of 10 years from the time of expiration, provided that the conditions for approval still exist.

Conditions for prolongation of the approval are that the variety still fulfils the requirements of DUS-testing, which is assessed in the post control of listed varieties, and that the variety continues to be of some importance in cultivation and use, which must be shown by stating the area of propagation of the variety in question.

Request for prolongation must be presented at least 2 years before the expiry of approval. If the treatment of the request has not been finished by the expiration of the approval a temporary prolongation is granted till the case is settled.

Certification and marketing of propagating material of an approved variety may take place until June the 30th in the 3rd year after expiration of the approval.

Common Catalogue for the EU Territory:

The member states of the EU have been given rules for variety testing and approval, the reason for which is the decision of establishing a common list with validity in the EU, which means free trade of seed of the listed varieties within the EU territory. However, a free market for varieties on the common list is not unconditional, as a member state may ask for exemption for one or more varieties within its area or part thereof.

When doing so, the member state in question must prove either that the variety is not distinct, homogeneous or stable, or that it has no satisfactory value for cultivation and use in the area of that member state.

Varieties approved for addition to a National List will also be approved for addition to the common EU-List after a short period.

Principles for National Listing and Granting of Plant Breeders' Rights

Legal background:

- The International Convention for Protection of New Varieties (UPOV-Convention) of 1961 - latest revised in 1991.
- Danish Law on Plant Novelties - Act No. 412 of 31 May 2000 - with amendments pursuant to Act No. 190 of 12 March 2009.
- The ministerial order regarding denomination of plant novelties No 1491 of 15 December 2010.

Conditions for the Grant of Plant Breeders' Rights:

Varieties of all genera and species of plants can be protected as plant novelties if they, at the time of the grant of protection, are:

- distinct, which means that they by one or more characteristics or combinations of characteristics can be distinguished from any other variety, known at the time of application,
 - sufficiently homogeneous,
 - stable in their specific characteristics (main characteristics) under propagation, this being performed as stated by the breeder, and
 - new, which means that propagation material or harvested material of the variety has not prior to the application been offered for sale, sold or in any other way been handed over, with the consent of the owner and with a view to commercial exploitation of the variety
 - in this country for more than one year, or
 - abroad for more than four years or, as regards grapevines, trees or the rootstocks of those for more than six years.
- A variety is always considered to be new,
- even if the material of the variety has been sold or transferred
 - to an official body for statutory purpose
 - to others according to an arrangement or other legal matter with a view to propagation only, or to treatment and storage with a view to propagation, provided that the recipient has not been entitled to use material of the variety,
 - by one company to another company, if the one company is owned by the other company, or both companies are owned by a third company, provided that none of the companies are co-operative societies, and
 - even if material or yield of the variety, produced by plants grown with a view to trial or breeding, has been offered for sale, sold or transferred to others provided that it has taken place without reference to the variety. This exception does not apply, however, to varieties used for production of a hybrid variety if repeated application of the variety is necessary for the production, and the material of the hybrid variety is sold or transferred to others.

The Minister of Food, Agriculture and Fisheries may as an exception approve that a variety, not fulfilling the novelty criteria can be protected if it is considered to have agricultural economic interest.

The Minister of Food, Agriculture and Fisheries establishes the provisions concerning the naming of new varieties; the Plant Novelty Board makes decisions concerning approval of proposed denominations.

The variety must be given a denomination that must not be mistakable for the name of another variety in the same class or cause confusion as to the characteristics of the variety, or of the identity of the breeder.

A variety denomination shall be considered to cause its users difficulties as regards recognition or reproduction in the following cases.

- where it is in the form of a "fancy name"
- it consists of a single letter,
- it consists of, or contains as a separate entity, a series of letters not forming a pronounceable word, except where this series is an established abbreviation,
- it contains a number, except where this is an integral part of the name, or where this indicates that the variety is or will be one of a numbered series of biologically related varieties,
- it consists of more than three entities; however, in the case of Article 63(4) of Regulation (EC) 2100/94, more than three entities shall not be considered as an impediment,
- it consists of, or contains an excessively long word,
- it contains a hyphen, a blank space other than between the entities of which it consists, a punctuation mark, an upper and lower case mixture within the entity, a subscript, a superscript, a symbol or a design or other marks.
- where it is the form of a "code"
- it consists of a number or numbers only, except in the case of inbred lines or of similarly specific types of varieties,
- it consists of a single letter,
- it contains more than ten letters, or letters and numbers,
- it contains more than four alternating groups of a letter or letters and a number or numbers,
- it contains a hyphen a blank space other than for separation from a pronounceable word, a punctuation mark, a subscript, a superscript, a symbol or a design or other marks

On submission of the proposal for a variety denomination, the applicant should declare whether the proposed denomination is intended to be in the form of a "fancy name" or of a "code".

If the applicant makes no declaration on the form for the proposed denomination, the denomination shall be considered to be a fancy name.

Decision on Plant Breeders' Rights:

When after completion of the examination the Plant Novelty Board finds that the variety satisfies the conditions for protection, the Board shall enter the variety in the Register of Plant Novelties and shall publish a notice to that effect.

Simultaneously with the publication of the registration the Board shall issue a certificate of protection, which shall be delivered to the applicant against payment of a registration fee.

Length of the period of protection:

- The certificate of protection shall be valid for a period of one year, and the period of validity may be extended by one year at a time up to 25 years, though for varieties of potatoes up to 30 years, reckoning from the date of issue of the certificate of protection.
- The period of validity of the certificate of protection shall be extended on the payment of an annual registration fee to the Plant Novelty Board.

Extent of protection:

Only with permission of the titleholder and only on the conditions specified by the titleholder, including payment of suitable royalties, the propagating material of a plant novelty can be

- used for commercial production, propagation or treatment and storage with a view to propagation and
- offered for sale, sold, or stored with a view to sale or handing over.

The Minister can establish provisions that also the one who propagates plant novelties of specified species for commercial use in his own business solely, shall pay royalties to the owner of the variety. This applies correspondingly

- for yield obtained by use of material of a plant novelty, if the owner of the variety has not allowed this use of the material, or has not had the possibility to exercise his rights to the material, and
- for varieties which

- essentially originate from a plant novelty, if the latter is not itself an essentially derived variety, or
- are not distinct in relation to the plant novelty, or
- can only be produced by repeated use of the plant novelty.

The Minister can decide that the above conditions be also applicable as regards products made of material of a plant novelty or the yield thereof.

The terms fixed by the owner of a variety must only concern use and offer for sale, and royalties. The terms shall be reasonable and the same for all producers.

Principles for Community Plant Variety Rights

1st September 1994 a new EU regulation concerning protection of new plant varieties entered into force. Regulation No. 2100/94 of 27 July 1994 concerning EU plant novelty protection was published in EEC no. 227 of 1 September 1994. The regulation applies from 27 April 1995.

EU variety protection is an alternative to the national plant protection, based upon the International Convention for Protection of New Varieties of Plants (UPOV). The material provisions (requirements to the variety, extent of protection etc.) in the new regulation contain the elements included in the UPOV convention of 1991.

Within EU, only Greece, and Luxembourg and Cyprus have no national protection system. The regulation means that a breeder can have his variety protected in the whole EU territory through one application and one decision. The regulation stipulates that a variety cannot at the same time be protected according to the regulation and according to a national legislation in an EU Member State. Besides it is stipulated that plant varieties exploited in the form of an EU variety protection cannot also be exploited for instance by a patent.

The administration of the regulation is taken care of by the Community Plant Variety Office (CPVO), established as an independent EU institution. In connection with the CPVO an Administrative Council is established which shall be advisory in questions within the sphere of the CPVO, and which stipulates the guidelines for the organisation of the CPVO, supervises the budget etc. In the Administrative Council each Member State and the EU Commission have 1 representative and 1 substitute. By voting each Member State has one vote.

Persons being citizens, or who are domiciled in one of the EU Member States or in a state being member of the International Union for Protection of New Varieties (UPOV) can apply for EU variety protection. Besides it is possible for persons, being citizens of, or who are domiciled in, other states than EU- or UPOV Member States to apply for protection, provided that the Administrative Council has made a decision to that effect. Such a decision can be made on condition that a reciprocity agreement is made with the state in question, i.e. that the citizens of the two parts obtain the same conditions.

EU variety protection comprises varieties of all plant genera and species, including hybrids between genera or species. EU variety protection can be granted to varieties being distinct, homogeneous, stable and new. Besides the variety must have a variety designation, the regulation holding closer rules on the applicability of variety denominations. The demands for distinctness, homogeneity, and stability are the same as those for a variety to be protected according to the Danish Plant Variety Protection Act. Varieties, being applied for EU variety protection will go through an examination for distinctness, homogeneity, and stability (DUS). In the regulation is foreseen that the CPVO can make a contract on the DUS testing with the already existing testing authorities where the testing takes place to day. In case there should exist no facilities for the examination of a certain species the Office itself can, however, bring about effectuation of a testing.
